

CSA 802 Module 1 Assessment Questions

1. How will an alarm device be made smart and alive using the internet? Assume that publish, subscribe services for the flight Expected Arrival (ETA) and train ETA are available.
2. Draw an architectural view of an IoT application for a post parcel tracking service with each parcel marked with a bar code. What will be the conceptual equation for the application?
3. Show the similarities in Oracle, IBM and CISCO architectural views for IoT applications and services.
4. What are the programs required for data analytics for library services and for monitoring issue, receipts and user demands?
5. Draw the architectural view of an M2M application for a car for traffic reports, control and monitoring.
6. Develop a conceptual design of a waste container management service in a smart city.
